

How Pollinators Pollinate

Habitat lab Field Journal Activity Lesson Plans & Resources

Online Lesson Plans & Resources: <https://www.alabamawildlife.org/oc-activity-pollinators/>

Building Background Vocabulary:

Put the chart on Elmo/whiteboard so that you can review the vocabulary to build background knowledge with your students.

"Bee" in the Know About Pollination

- **Pollinators** are organisms that help to move pollen from one flower to another.
- **Pollination** is the process of pollen being transferred from the male part of one flower to the female part of another flower of the same species.
- The male part of the flower is called the **stamen**.
- **Pollen** is small, powdery grains produced on the male part of the flower called the **anther**.
- The female part of the flower is the **pistil**.
- Pollination causes the pollen to travel down a **pollen tube** where new seeds are then made.
- The new **seeds** can make new plants.
