

Birds & Their Adaptations

Name: _____ Date: _____

Use the Alabama Wildlife Federation's Wonders of Wildlife Webpages to research and answer questions about one of the bird species listed below. Circle the name of the bird you select.

Eastern Bluebird Northern Cardinal

Northern Mockingbird Red-bellied Woodpecker

1. Draw a picture of the bird.

2. Describe the colors of its feathers:

Head: _____

Neck: _____

Chest: _____

Belly: _____

Back: _____

Wings: _____

Tail: _____

3. How do the colors of their feathers help them survive and reproduce?

4. Describe how birds' bones help them survive:

5. Which of these describes its beak?

short & thin thick & pointed cone-shaped long & thin wide & flat large & hooked

6. How does its beak help it survive?

7. What is a gizzard? Describe how birds' gizzards help them survive:

8. Which of the following describes its feet?

two toes forward & two toes back (woodpecker)

three toes forward & one toe back (songbird)

large toes with claws (raptor)

webbed feet (duck)

9. How do its feet help it survive?

10. List this species' other adaptations (other than its feather colors, bones, beaks, gizzards, feet) and provide evidence how these adaptations help it survive and reproduce in its habitat:

Explore the habitat lab and look for the bird you selected.

Did you find the bird species you selected? Yes ___ No ___

If yes, where did you find it? _____

Describe any other birds that you see. _____

Birds and Their Adaptations

Adaptations are those features that help an organism survive in a specific ecosystem. Using the chart below, study birds' adaptations and then identify these same features in the bird species found in your school's habitat lab and schoolyard wildlife habitat.

Example Adaptations of Common Backyard Birds		
Adaptation	Type of Bird	Advantage
Feathers		
Bright plumage	Some male birds	Attracts females during courtship and mating
Dull plumage	Some female birds	Aids in camouflage while nesting
Change of plumage with seasons	Goldfinch	Dull plumage provides camouflage in winter and bright yellow plumage attracts mate in spring & summer
Beaks		
Thick & Pointed	Woodpecker	Breaks and probes the bark of trees looking for insects
Large & Hooked	Hawk / Owl	Tears flesh of prey that it eats
Short & Cone-shaped	Finch	Cracks seeds and nuts for food
Long & Slender	Hummingbird	Probes flowers for nectar it eats
Short & Pointed	Nuthatch	Works like tweezers to grab insects hiding in bark
Flat & Wide	Flycatcher	Helps catch insects in air during flight
Wings		
Fringed at tips	Owl	Silent flight
Large & Broad	Hawk	Aids in soaring while hunting & flying with caught prey
Tapered	Flycatcher/Swallow	Fast flight to catch insects and to escape predators
Short, blunt	Chick-a-dee	Erratic flight, quick maneuver to escape by zig-zagging
Feet		
Webbed	Duck	Aids in swimming
Claws	Hawk / Owl	Grasping when hunting prey
Three toes forward & one behind	Cardinal	Perching on branches
Two toes forward & two behind	Woodpecker	Holding on to side of trees and climbing side of trees
